EDUCATION

Lund University, Sweden	Lund, Sweden
Exchange Program; Master's in Computer Science	Jan – Jun 2026
University of Ghana, Ghana	Accra, Ghana
Master's in Computer Science; CGPA 3.75/4.0	Oct 2024 – July 2026
University of Ghana, Ghana	Accra, Ghana
Bachelor's in Computer Science; CGPA 3.45/4.0	Oct 2019 – Aug 2023

SKILLS SUMMARY

• Languages:	Python, SQL, JavaScript, Dart, HTML, CSS, Tailwind
• Frameworks:	Django, FastAPI, Flutter, PyTorch, TensorFlow, ScikitLearn, React, Three.js
• Tools:	Git, Postman, PostgreSQL, PgAdmin, LLM, Agentic AI, Docker, REST API, Sentry
• Platforms:	GitHub, Jupyter Notebook, VSCode, Codex, DigitalOcean, Linux, Git Actions
• Soft Skills:	Rapport Building, Team Playing, People Management, Excellent Communication

WORK EXPERIENCE

System Development Consultant SILEX Consulting Limited	July 2025 - Present
• Led the development of ICCASA's Monitoring and Evaluation system. • The system includes custom projects, indicators, outcomes, baselines, and forms for data collection. The system also includes tablet mobile apps for data collection by field agents. • Automatic computations with custom formulae, with a comprehensive reporting system.	
Lead Software Engineer AfriLearnTech Ghana Limited	September 2025 – Present
• Led the development of a national digital learning platform for Liberia's Ministry of Education. • System includes LLM Agents for course content generation to augment localized content. • System includes (synchronizable) offline boxes to be deployed in schools with low connectivity.	
Software Developer Iridis Labs	Sept 2023 – Jun 2025
• Worked on a management software for the Electricity Regulatory Commission of Liberia. • Recruited and onboarded 10 interns and conducted training sessions for them. • Technologies used included: Flutter, PostgreSQL, React, TypeScript, and Ubuntu Servers.	
Founder / Lead Consultant PKay Software Consultancy	2023 – Present
• I founded and currently run PKay Software Consultancy, a software consulting firm. • Led the development of software systems, including web and mobile, for a wide range of clients. • Systems include Admission Systems, Accountability (Buddy) Systems, and Business Portals. • Handled stakeholder engagements and the entire Software Development Life Cycle.	
Software Developer PayHub Ghana Limited	April 2021 - December 2025
• Developed Payment Processing APIs for internal use and for clients. • Developed fintech-grade dashboards for transactions monitoring and management. • Reduced system latency through Redis-based caching and optimized session management.	

PROJECTS

Stockora (Multi-tenant Purchase, Stock and Inventory Management SaaS) | [Link](#)

- Built Stockora, a multi-tenant SaaS platform for purchase, inventory, sales, invoicing and profit management.
- Developed landed-cost calculations, batch-level stock tracking, automated reporting and real-time profitability insights.
- Integrated Paystack subscriptions, Resend emails, FCM notifications, role-based access and a platform oversight portal.
- Delivered an offline-capable Flutter app, automated CI/CD deployment and encrypted cloud backup infrastructure.

ProCMOS (A Procurement and Contract Management System)

- Designed and built ProCMOS, a configurable procurement and contract management operating system.
- Implemented governed workflows for sourcing, evaluations, approvals, supplier management, payments and contracts.
- Developed secure institutional, supplier and public portals with role-based access and comprehensive audit trails.
- Delivered a responsive full-stack platform using Next.js, TypeScript, Django REST Framework and PostgreSQL.

ACDI ERP (An Enterprise Resource Planning Software for ACDI)

- Built NanoERP, a modular multi-tenant platform integrating finance, HR, procurement, inventory, projects, training, M&E, and operations.
- Developed secure role-based workflows, approval automation, reporting dashboards, document management, and configurable institutional modules.
- Created an offline-first Flutter mobile app with encrypted local storage, dynamic field-collection forms, and automatic data synchronization.
- Designed production-ready web, admin, API, deployment, object-storage, backup, and tenant-isolation architecture.

Holistic Modern M&E Software as a Service | [Demo Link](#)

- Developed core M&E workflows for projects, outcomes, indicators, versioned forms, field submissions, automated indicator computations, dashboards, and PDF reports.
- Implemented multi-tenant operations features, including role-based access, audit logs, file uploads, billing/subscriptions, Paystack payments, notifications, and background jobs.
- The system also includes tablet mobile apps for data collection by field agents.

Projection Software | [Link](#)

April 2026

- Built a desktop church projection platform using Tauri, React, and SQLite.
- Developed a real-time dual-window projection and display engine.
- Engineered offline content management for scriptures, hymns, and announcements.

AfriLearn Digital Learning Platform | [Link](#)

Oct 2025 - April 2026

- Built an offline-first national digital learning platform for Liberia's Ministry of Education.
- System includes easy-to-deploy hardware 'boxes' deployable in low connectivity areas.
- Automatic updation and synchronization of educational content (videos, Audio, PDFs, etc.).
- Uses LLM to suggest and generate personalized lessons and assessments for learners.

APanel Cloud Deployment Platform

April 2026

- Built a VPS deployment dashboard for apps, servers, env variables, pipelines, and live logs.
- Added GitHub repo import, source uploads, OAuth callback, and server onboarding flows.
- Connected backend metrics, deployment log hydration, and WebSocket event ingestion.
- Orchestrated setup for packages, DB, domains, SSL, service restarts, and health checks.

Synther | [Link](#)

April 2026

- A synthetic data generation tool for generating highly configurable datasets
- Implemented Celery workers and Redis for scalable background generation and live progress.
- Designed an intuitive wizard with datatype-aware fields, options, and downloads.
- Ensured data fidelity with numpy/Faker-based generators, and deterministic seeding.

Nrf24 Firewall (FullStack and Embedded) | [Link](#)

March – April 2026

- Designed/implemented a lightweight software-defined firewall for an NRF24-based IP network.
- Built a full-stack system using FastAPI and React with a staged rule engine and web interface.
- Configured Linux TUN interfaces, routing, NAT, and integrated nftables for traffic filtering.
- Evaluated system performance using UDP throughput and latency measurements with iperf3.

ReviewMate | [Link](#)

November 2025

- Designed and built a Word add-in with an LLM-powered review agent (TypeScript, Office.js).
- Designed prompt-driven review workflows to generate structured, actionable feedback as review comments in Word.
- Integrated OpenAI-compatible LLM pipeline with JSON outputs and resilient parsing.
- Added AI writing tools (trim, paraphrase, summaries) with secure API key handling.

Admissions Management System | [Link](#)

January 2024 – Present

- Designed/developed an admissions management system for [GIMPA](#) (a tertiary institute in Ghana)
- The system includes a management portal for monitoring and management, with an automated and manual notification system.
- Over 2000 applications processed so far, and counting.
- Application processing time is improved by over 500 percent.

Other Software Products

- Monitoring and Evaluation Software
- School Management System
- Hospital Management System
- Pharmacy Management System
- Court Management System
- Election / Voting Management System
- Offline-capable mobile applications
