

EDUCATION

|                                                |                     |
|------------------------------------------------|---------------------|
| Lund University, Sweden                        | Lund, Sweden        |
| Exchange Program; Master’s in Computer Science | Jan – Jun 2026      |
| University of Ghana, Ghana                     | Accra, Ghana        |
| Master’s in Computer Science; CGPA 3.75/4.0    | Oct 2024 – Oct 2026 |
| University of Ghana, Ghana                     | Accra, Ghana        |
| Bachelor’s in Computer Science; CGPA 3.45/4.0  | Oct 2019 – Aug 2023 |

SKILLS SUMMARY

|                |                                                                            |
|----------------|----------------------------------------------------------------------------|
| • Languages:   | Python, SQL, JavaScript, Dart, HTML                                        |
| • Frameworks:  | Django, FastAPI, Flutter, PyTorch, TensorFlow, ScikitLearn                 |
| • Tools:       | Git, Postman, PgAdmin, LLM, Agentic AI, Docker, REST API                   |
| • Platforms:   | GitHub, Jupyter Notebook, VSCode, Cursor, DigitalOcean, Linux Servers      |
| • Soft Skills: | Rapport Building, Team Playing, People Management, Excellent Communication |

WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                               |                            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| Lead Software Engineer   <a href="#">AfriLearnTech Ghana Limited</a>                                                                                                                                                                                                                                                                                          | September 2025 – Present   |
| <ul style="list-style-type: none"><li>• Led the development of a national digital learning platform for Liberia’s Ministry of Education.</li><li>• System includes LLM Agents for course content generation to augment localized content.</li><li>• System includes (synchronizable) offline boxes to be deployed in schools with low connectivity.</li></ul> |                            |
| Founder   PKay Software Consultancy                                                                                                                                                                                                                                                                                                                           | October 2023 – Present     |
| <ul style="list-style-type: none"><li>• Led the development of software systems, including web and mobile, for a wide range of clients.</li><li>• Systems include Admission Systems, Accountability (Buddy) Systems, and Business Portals.</li><li>• Handled stakeholder engagements and the entire Software Development Life Cycle.</li></ul>                |                            |
| Software Developer   PayHub Ghana Limited                                                                                                                                                                                                                                                                                                                     | April 2021 - December 2025 |
| <ul style="list-style-type: none"><li>• Developed Payment Processing APIs for internal use and for clients.</li><li>• Developed fintech-grade dashboards for transactions monitoring and management.</li><li>• Reduced system latency through Redis-based caching and optimized session management.</li></ul>                                                 |                            |

PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                       |

| AfriLearn Digital Learning Platform   <a href="#">Link</a>                                                                                                                                                                                                                                                                                                                                                                                          | Oct 2025 - April 2026 |
| <ul style="list-style-type: none"><li>• Built an offline-first national digital learning platform for Liberia’s Ministry of Education.</li><li>• System includes easy-to-deploy hardware ‘boxes’ deployable in low connectivity areas.</li><li>• Automatic updation and synchronization of educational content (videos, Audio, PDFs, etc.).</li><li>• Uses LLM to suggest and generate personalized lessons and assessments for learners.</li></ul> |                       |
| APanel Cloud Deployment Platform   <a href="#">Link</a>                                                                                                                                                                                                                                                                                                                                                                                             | April 2026            |
| <ul style="list-style-type: none"><li>• Built a VPS deployment dashboard for apps, servers, env variables, pipelines, and live logs.</li><li>• Added GitHub repo import, source uploads, OAuth callback, and server onboarding flows.</li><li>• Connected backend metrics, deployment log hydration, and WebSocket event ingestion.</li><li>• Orchestrated setup for packages, DB, domains, SSL, service restarts, and health checks.</li></ul>     |                       |

**Synther | [Link](#)****April 2026**

- A synthetic data generation tool for generating highly configurable datasets
- Implemented Celery workers and Redis for scalable background generation and live progress.
- Designed an intuitive wizard with datatype-aware fields, options, and downloads.
- Ensured data fidelity with numpy/Faker-based generators, and deterministic seeding.

**Nrf24 Firewall FullStack and Embedded | [Link](#)****March – April 2026**

- Designed/implemented a lightweight software-defined firewall for an NRF24-based IP network.
- Built a full-stack system using FastAPI and React with a staged rule engine and web interface.
- Configured Linux TUN interfaces, routing, NAT, and integrated nftables for traffic filtering.
- Evaluated system performance using UDP throughput and latency measurements with iperf3.

**ReviewMate | [Link](#)****November 2025**

- Designed and built a Word add-in with an LLM-powered review agent (TypeScript, Office.js).
- Designed prompt-driven review workflows to generate structured, actionable feedback as review comments in Word.
- Integrated OpenAI-compatible LLM pipeline with JSON outputs and resilient parsing.
- Added AI writing tools (trim, paraphrase, summaries) with secure API key handling.

**Admissions Management System | [Link](#)****January 2024 – Present**

- Designed/developed an admissions management system for [GIMPA](#) (a tertiary institute in Ghana)
- The system includes a management portal for monitoring and management, with an automated and manual notification system.
- Over 2000 applications processed so far, and counting.
- Application processing time is improved by over 500 percent.

**Online Market Place (Oysloe Online Marketplace) | [Link](#)****October – December 2025**

- Built an online marketplace platform for a client for connecting buyers with sellers.
- System includes mobile apps on both PlayStore and AppStore.
- Implemented a chatting feature using websockets and channels, and Integrated payments.
- System has a dashboard for administrative monitoring and management.
